

CTSX Microsoft Translator

The CTSX Microsoft module performs translation via.

- [Installation](#)
- [Configuration](#)
- [Usage](#)
- [How it works](#)
- [Known Issues](#)
 - [Text Too Large](#)

Installation

Maven is the easiest way to install the module. Add the following dependency to your [bundle](#):

```
<dependency>
  <groupId>info.magnolia.translation</groupId>
  <artifactId>magnolia-content-translation-support-ext-microsoft</artifactId>
  <version>${CTSExtendedVersion}</version>
</dependency>
```

In order to start the Microsoft translation process, please make sure that the core and apps modules which mentioned in [Content Translation Extended](#) have already been installed.

Configuration

Configuration of the Google service provider is handled in the module config. This provider can be configured with the following properties.

autoTranslationAllowed	optional , <i>default is false</i> When true the content review process (workflow) is bypassed.
class	required Definition class for the translator to be used. See <code>info.magnolia.translation.ext.provider.microsoft.definition.MicrosoftProviderDefinition</code>
clientId	required Identifies the client application with Google.
clientToken	required Client secret for the client ID.
configName	required Identifies the configuration within Magnolia.
defaultFlag	optional The default configuration used by the system in the case of multiple translation services being used.
implementationClass	required Implementation class for interfacing with Google. See <code>info.magnolia.translation.ext.provider.microsoft.translator.MicrosoftTranslator</code>

Usage

After registration and starting, The Content Translation Support Extended (CTSX) module will bind the Microsoft translator to Configuration field.

You can test the connection to the translator api before using.

How it works

The same steps with [CTSX Google Translator](#) but you will choose Microsoft.com instead of Google.com in the Configuration.

Known Issues

Text Too Large

In case of submitting many contents (such as the whole /travel page includes dependences), an error will be thrown as below. This is known issue as number of submitted segments is over microsoft's threshold.

```
ERROR info.magnolia.translation.ext.provider.microsoft.translator.MicrosoftTranslator: Error occurred while translating
java.lang.RuntimeException: TEXT_TOO_LARGE - Microsoft Translator (Translate) can handle up to 10, 240 bytes per request
```
