

Templates Usage

Magnolia Compatibility	
5.5	✓
5.6	✓
5.7	✓
6.1	✓

The Templates Usage Module gives you an overview of page and component templates usage, and helps you locate those in your website. This allows you, for example, to check for regression of pages or components that have been changed.

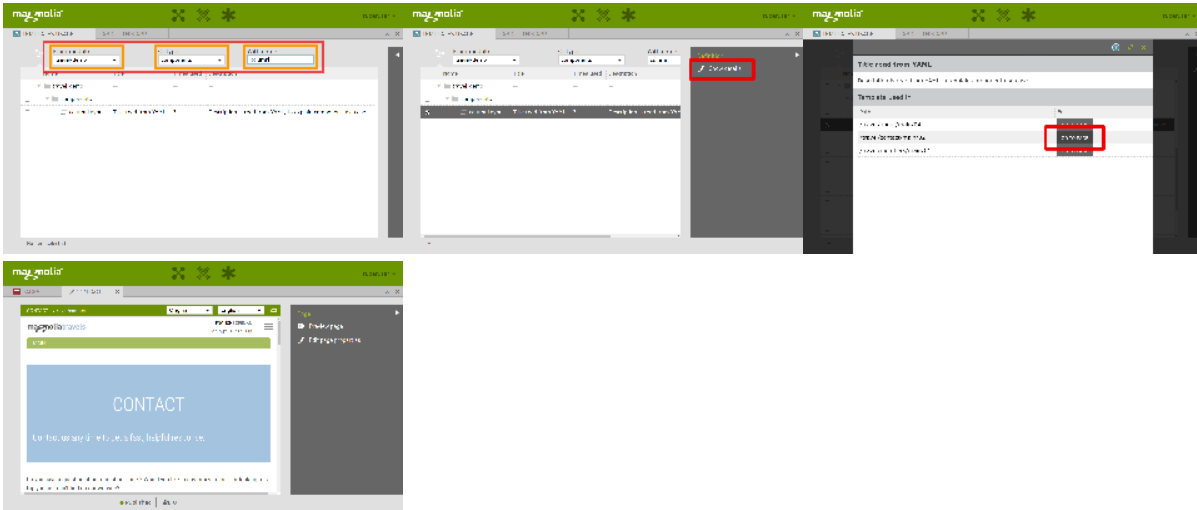

Templates are grouped by module name and displayed in a tree view identical to the setup of the templates. Here you can see how often a template is used. When requesting the details of a particular template, a list is displayed with the paths where it is used. From here you can navigate to the pages.

A filter helps you to narrow down the amount of templates listed either by selecting a module, selecting a type of template (page or component) and/or by searching for a name.

The screenshot shows the Magnolia user interface for the 'TEMPLATES USAGE' module. The header includes the Magnolia logo, navigation icons, and the user 'superuser'. Below the header, there are filter options: 'From module' (any module), 'Of type' (any type), and 'With name' (any name). The main content is a table with the following columns: Name, Title, Times used, and Description. A red box highlights the 'Times used' column.

Name	Title	Times used	Description
travel-demo	—	—	—
components	—	—	—
carousel	—	1	—
columnLayout	Title read from YAML	3	Description is read from YAML, to explain component use case
form	—	1	—
jumbotron	—	11	—
link	—	12	—
linkList	—	4	—
searchResults	—	1	—
social	—	4	—
teaser	—	8	—
textImage	—	35	—

Installation

This module requires Enterprise Edition of Magnolia. The module can be added as a Maven dependency in the main and webapp POM file:

```
<dependency>
  <groupId>nl.info.magnolia</groupId>
  <artifactId>templates-usage</artifactId>
  <version>{moduleVersion}</version>
</dependency>
```

Additionally a dependency from your main module descriptor is necessary:

```
<dependency>
  <name>templates-usage</name>
  <version>{2/* | 3/*}</version>
</dependency>
```

Versions and compatibility table

Compatibility

Module Version	Magnolia Version
3.1.x	6.1.x
3.0.x	5.7.x
2.1.x	5.6.x
1.1.x	5.5.x

History

- Version 3.1.0: first public release for Magnolia 6.1.x
 - Fixed issue [TPLTSUSAGE-2 - Getting issue details...](#) STATUS - now when allowedModules are empty, all modules are displayed to all users
- Version 3.0.3
 - Fixed issue [TPLTSUSAGE-2 - Getting issue details...](#) STATUS - now when allowedModules are empty, all modules are displayed to all users
- Version 3.0.0: first public release for Magnolia 5.7.x
- Version 2.1.0: first public release for Magnolia 5.6.x
- Version 1.1.0: first public release for Magnolia 5.5.x

Configuration

- When no configuration done at all (no properties under allowedModules node in config), all modules are displayed to all users,
- Configuration is stored and managed in main module node in JCR (/modules/templates-usage/config)
- By adding properties to /templates-usage/config/allowedModules you can control which modules are displayed,
- The superuser will always see all modules available,
- In the template definition (YAML), the 'title' and 'description' field can be used to describe the component.

Sample configuration

/modules/templates-usage/config.yaml

```
'config':  
  jcr:primaryType: 'mgnl:content'  
  'allowedModules':  
    '0': 'main-website'  
    '1': 'google-maps-magnolia'
```
