

# 2019 Updates to the Magnolia Forge

With Github and co, online software development has improved, and we are updating the Magnolia Forge concept to take advantage of that.

## Goals

Reduce the load on Magnolia infrastructure and staff.

Easier and more "self-service" for contributing developers.

More visibility for forge projects

Easier for other developers to contribute to forge projects.

## The changes

### Code hosting

Move from [Magnolia's Bitbucket server](#) to the [magnolia-community](#) Github organization.

(Existing Bitbucket projects will be preserved, but we encourage you to migrate them to Github.)

### Ticketing

Move from Magnolia's Jira to Github issues.

(Existing Jira projects will be preserved.)

### CI

Move from Magnolia's Jenkins server to [Travis CI](#).

**(Existing Jenkins jobs will be removed.)** ⚠

### Documentation

Continue with pages on Magnolia's wiki: [Forge Modules](#)

(We encourage you to provide complete Readme files on your Github projects. Use the "Markdown plus" Wiki Macro to display your readme content on the wiki page. See an [example](#))

### Artifact hosting

Continue with Magnolia's Nexus.

(But contributors have option to deploy to other repositories, too)

### Forge module boilerplate

Move to sample projects on Github: [forge-community-sample](#), and [forge-enterprise-sample](#)

(Both the Maven Archetype for Forge projects, and the Forge parent poms are deprecated in favor of the simplified approach described on the above Github projects.)

## Example

See an example of an updated forge project:

<https://github.com/magnolia-community/processed-resources>

[Processed Resources App](#)

## Your move

If you have an existing forge project, but want to move your project to github (yes!), go ahead and [submit a new forge request](#) to get access to the magnolia-community organization.

If you need assistance, or have feedback on these changes, either comment on this wiki page, or send an email to [forge@magnolia-cms.com](mailto:forge@magnolia-cms.com).
