Scenarios

This sections contains **scenarios** describing how Magnolia 5 is intended to be used to achieve certain tasks. Each scenario is divided into three parts:

- Story: describes what the user wants to achieve. It is written in every-day language and from the perspective of a user.
- Description of desired behavior: defines in much detail, what the interface has to offer and how it should work to ensure that the behavior captured in the user story is met.
- Mockups: conceptual, visual solutions for the behavior description.

Although visual, our **mockups** are still conceptual only in the sense that they clearly show the chosen solution and define all needed interface elements, they also position these elements in a chosen layout, but actual web design is still missing - icons and colors are not defined and even the layout could be altered still. But a mockup has to be consistent and demonstrate the inner workings of the chosen solution or show different possible solutions to the problem at hand.

Our development team takes all of these three elements and tries to match these with the technical possibilities offered by the chosen web development framework - in case of Magnolia 5, this is Vaadin. During this process, we might discover that the desired behavior is too hard to achieve or that the web development framework offers an alternate solution that might work just as well as the one we set out to implement. We then decide on the spot, how we want to proceed, often without updating these wiki pages describing the original idea. After all, the pages here are a start and are not intended to document the finally implemented solution.

- Basic usage
  - Focusing, selecting and opening items
  - Navigating trees
  - Navigating grids
  - Navigating lists
- Using the Clipboard
- Using Undo and Redo
- Using AdminCentral
  - Navigating in AdminCentral
  - Working with items in AdminCentral
  - AdminCentral minimized interface
  - Browse the site structure
  - Use the page list
  - Search for pages
- Adding content
  - Add a new page
    - Select a page template
  - Add a new paragraph
    - Select a paragraph template
- Editing content
  - Edit a page
    - Working with page content and the page itself
    - Edit a page using its preview
    - Preview a page
    - Edit a page using the structure view
      - Experiments in in-line editing for Page Structure Editing
    - Edit and preview a page on large and small screens
- Working with digital assets
  - Managing digital assets in AdminCentral
    - Using asset sets to organize assets
    - Viewing digital assets as list
    - Viewing digital assets as thumbnails
    - Viewing digital assets in a folder structure
    - Working with assets and renditions
    - Controlling our brand
  - Using digital assets in a paragraph
- Setup and configure Magnolia
  - Configure main settings
