- [Known Issues](#)

Installing

Maven is the easiest way to install the module.

```
<dependency>
  <groupId>info.magnolia.ui</groupId>
  <artifactId>magnolia-ui-color-picker-field</artifactId>
  <version>1.0</version> <!-- 1.0 for Magnolia 6. Use 1.1 for Magnolia 6.2 -->
</dependency>
```

Source Code

The source for this module can be found here: <https://github.com/magnolia-community/color-picker-field>

Issues, Bugs and Improvements

Report them here: <https://github.com/magnolia-community/color-picker-field/issues>

Configuration

Simply configure the color picker as a field in your dialog or app:

/my-module/dialogs/color-picker-example.yaml

```
form:
  tabs:
    - name: tabColor
      label: Color Picker
      fields:
        - name: color
          label: Color
          class: info.magnolia.ui.field.ColorPickerFieldDefinition

  actions:
    commit:
      class: info.magnolia.ui.admincentral.dialog.action.SaveDialogActionDefinition
    cancel:
      class: info.magnolia.ui.admincentral.dialog.action.CancelDialogActionDefinition
```

Known Issues

- Closing the dialog (i.e. Save and Cancel) does not automatically close the color picker. You must pick the color, click "OK" and then Save.
- In version 1.0, the "name" of the color picker must be "color". Limited to one picker per form. NB: Solved in 1.1 for Magnolia 6 UI.
