

# Concept - Mail module in M5

## Summary

Target is to get the same functionality for M5 as for M4.5 :

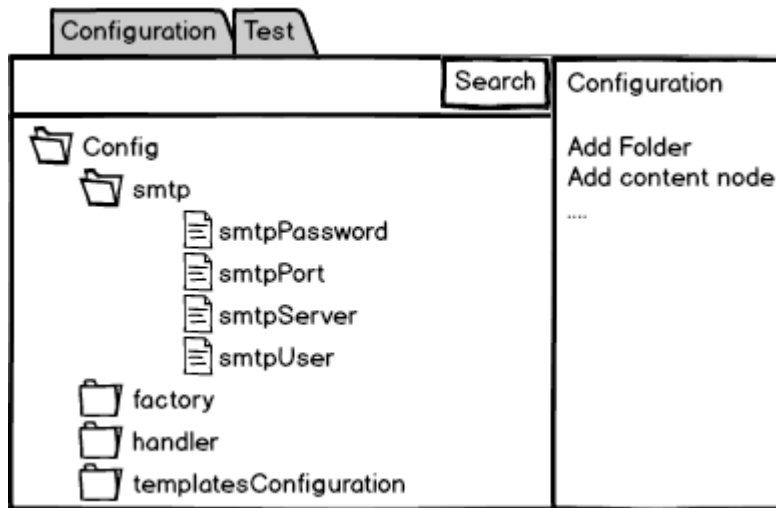

[Mail module](#)

## Mail App

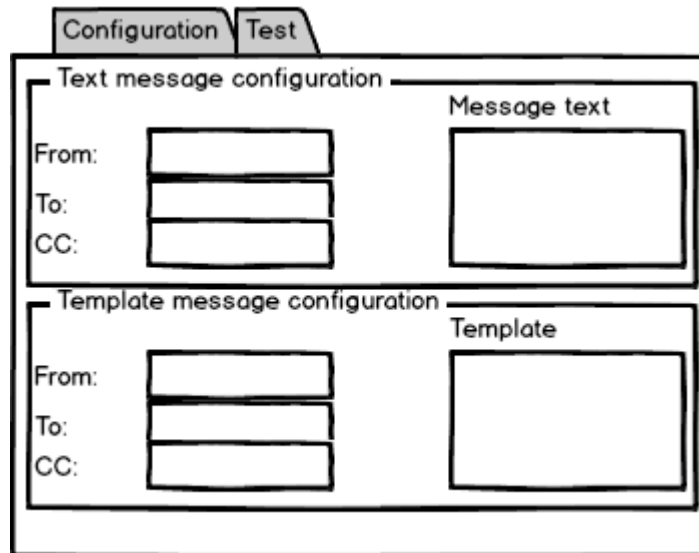

Proposal

Create an App with 2 Tabs

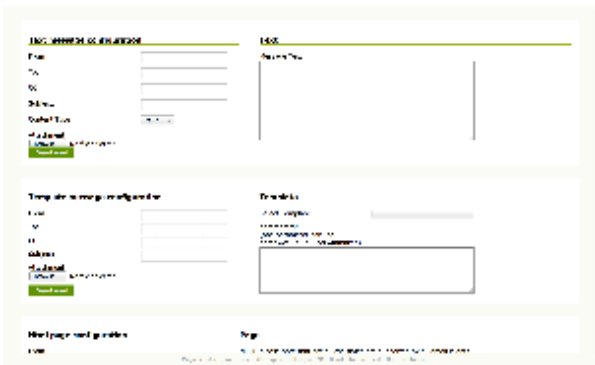

First Tab display the Mail configuration parameter.

Second tab display the Mail test page

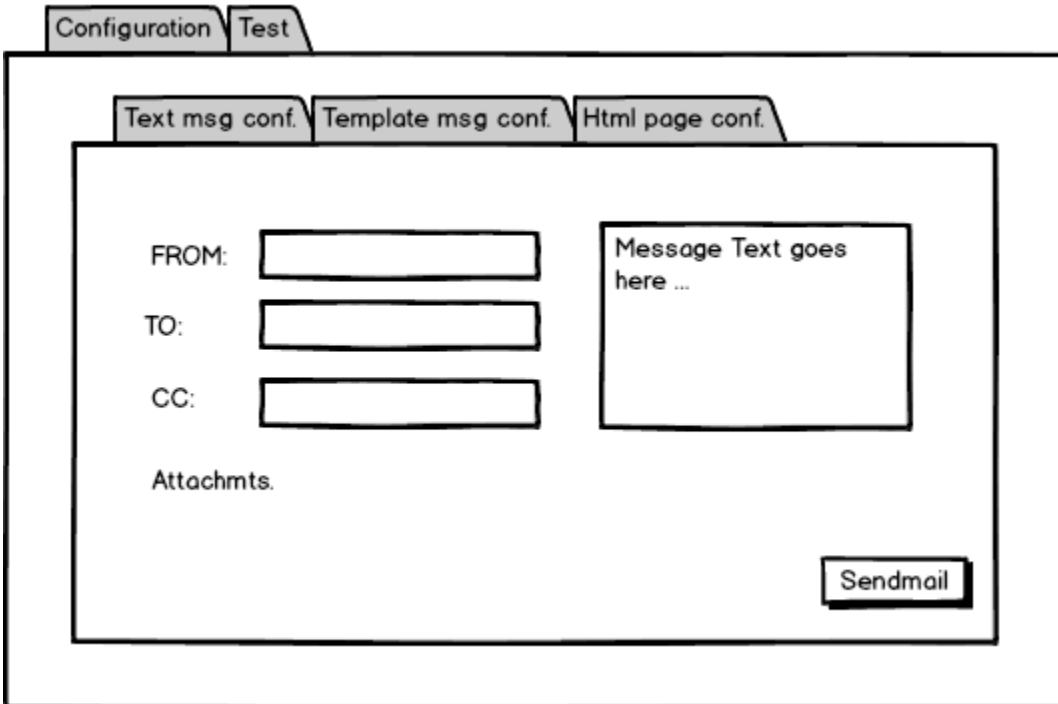

M4.5 Screen shot

the 2nd "main-tab" (sub-app) should contain itself 3 sub-tabs with the following "functions":

- Text message configuration
- Template message configuration
- Html page configuration

## Tasks
