

Unconference 2014: New 5.3 Features - a closer look (eg Personalization)

This unconference session basically consisted of a small presentation of the new 5.3 features (personalization, workflow & tags-manager) and the main 5.3 improvements (mainly UI-related & JCR-agnostic content apps).

Questions:

- RE: Help texts in dialogs
 - Make it configurable to always display them (even one single help text that might be very important)?
- Is 5.3 production ready?
 - 5.3 should be used in production in favour of 5.2.2.
