

I18n keys - Currently supported

Intro

 New suggested key

 Key suggested for deprecation

 Current key - no change suggested.

Notes

<something>, angle-brackets are used to indicate the name of that specific item. So <app> might be "pages" or "categories" in a real key.

Most keys also support not including the ".label" suffix.

Apps

 <app>.app.label

App launcher group

 app-launcher.<group>.label

Actionbar

Sections

 <app>.<subapp>.actionbar.sections.<section>.label

 <app>.<subapp>.actionbar.<section>.label

 <app>.actionbar.sections.<section>.label

 <app>.actionbar.<section>.label

 actionbar.sections.<section>.label

Actions

 <app>.<subapp>.actions.<action>.label

 actions.<action>.label

Columns

 <app>.<subapp>.views.<view-type>.<column>.label

 <app>.<subapp>.views.<column>.label

 <app>.views.<view-type>.<column>.label

 <app>.views.<column>.label

 views.<view-type>.<column>.label

 views.<column>.label

Forms

Dialog

 `<module>.<dialogPath>.label`

 `dialogs.<dialogPath>.label`

Tabs

 `<module>.<dialogPath>.<tab>.label`

 `<tab>.label`

 `tabs.<tab>.label`

Fields

 `<module>.<dialogPath>.<tab>.<field>.label`

 `<module>.<dialogPath>.<field>.label`

 `<dialogPath>.<tab>.<field>.label`

 `<dialogPath>.<field>.label`

 `<tab>.<field>.label`

 `fields.<field>.label`

Validators

 `<parentFieldId18nKey>.validation.errorMessage //no information about validator just field definition`

Templates

 `<module>.templates.<componentPath>.title`

 `templates.<componentPath>.title`

 `<module>.templates.areas.<area>.title`

 `templates.areas.<area>.title`
