

POMs v37 Release Notes

- [Noteworthy](#)
- [Upgrading](#)
- [Complete changelog](#)

Noteworthy

- This version upgrades most Maven plugins, especially to support build/plugin executions on latest Java runtime (12 as of writing).
 - see [BUILD-340 - Getting issue details...](#)
- We introduce the addons parent POM, deploying snapshots and releases to the dedicated respective Nexus repos.

```
<parent>
  <groupId>info.magnolia.maven.poms-addons</groupId>
  <artifactId>magnolia-parent-pom-addons</artifactId>
  <version>37</version>
</parent>
```

- Enterprise users will have to update their [Maven settings](#), in order to include add-on module dependencies into their projects.
- POMs 37 also finally fix an issue with POMs 36, which no longer aggregated javadocs in the maven sites, for multi-module projects.
 - see [BUILD-321 - Getting issue details...](#)

Upgrading

Upgrading should be straightforward. For Magnolia staff, we will roll the upgrade to supported branches automagically.
