

POMs v33 Release Notes

- [Noteworthy](#)
- [Upgrading](#)
- [Complete changelog](#)

Noteworthy

This minor version streamlines the supported maven version range and fixes an issue with the maven clirr plugin:

- The required Maven version is now *enforced* to 3.2.3 or higher. That version was released almost three years ago, so there is a fair chance you have a more recent version anyway.
 - For the story, this is because Maven 3.2.2 suffered issues with imported `dependencyManagement` sections; that was known ever since since we upgraded to Maven 3. (See [BUILD-130 - Getting issue details...](#) [STATUS](#))
 - For releasing, 3.2.3 used to be **strictly** enforced too. **We decided to loosen that** to the same range, in particular because this check only applied when performing releases, not when preparing them.
 - Consequently, our `release-perform-profile` is no more.
 - This was successfully tested with Maven 3.2.5, 3.3.9 as well as 3.5.0. 🍌
 - See [BUILD-255 - Getting issue details...](#) [STATUS](#) .
- The Clirr Maven plugin was updated to 2.8, effectively fixing plugin failures on Java 8 projects.
 - See [BUILD-219 - Getting issue details...](#) [STATUS](#) .
- This version also made a couple additions to the supplemental models.
 - See [BUILD-256 - Getting issue details...](#) [STATUS](#) .

Upgrading

Upgrading should be straightforward. Please upgrade at your earliest convenience, ideally before your next release.
