

# POMs v34 Release Notes

- [Noteworthy](#)
- [Upgrading](#)
- [Complete changelog](#)

## Noteworthy

This version fixes issues with the Maven Project Info Reports plugin and site generation, as well as with custom Javadoc doclets:

- The Maven Project Info Reports plugin has been updated to version 2.9, effectively clearing various errors
  - due to a regression in version 2.8 of the plugin - see <https://issues.apache.org/jira/browse/MPIR-251>
  - resolution of dependency locations was also turned off; this was triggering errors as well and blacklisting some repositories
  - see [BUILD-282](#) - Getting issue details... [STATUS](#)
- The upgrade above also got rid of infamous stack traces re: "Invalid byte tag in constant pool: 18"
  - Project Info Reports plugin was still using an old version of Apache Commons BCEL, which was unable to analyze classes compiled with JDK8.
  - see <https://issues.apache.org/jira/browse/MPIR-308>
- The Javadoc plugin configuration has been slightly updated regarding usage of a custom doclet.
  - Custom `docletArtifacts` need to be configured in plural form, over the singular one.
  - This prevents the *asciidoclet* artifact and its dependencies from leaking into the build, when declaring multiple doclet artifacts.
  - see [BUILD-238](#) - Getting issue details... [STATUS](#)
- This version also updates the magnolia-build-resources supplemental models for use with newer libraries present in our bundles.
  - see [BUILD-284](#) - Getting issue details... [STATUS](#)

## Upgrading

Upgrading should be straightforward. Please upgrade at your earliest convenience, ideally before your next release.
