

Concept - Incremental Search and Filtering in Configuration Tree

- [Feature Overview](#)
- [Use Cases](#)
 - [Quickly locate that node or property you're looking for](#)
 - [Quickly explore everything that is available](#)

Feature Overview

- Add a floating row of text boxes to the tree and list views of Configuration app
- As the user types in these text boxes, filter the content to only show rows whose corresponding column contains a matching value, or ancestors of such rows in the case of a tree
- Search is conjunctive between different columns
- Search value can include regular expressions
- This is feature that can be available and benefit all content apps

Use Cases

Quickly locate that node or property you're looking for

TODO

Quickly explore everything that is available
