

# Debian and Redhat Packages

This feature is still in beta. Use at your own risk. Soon there will be a *staging* component containing snapshots, leaving the *main* component for releases.

This is a guide for using the packages provided by us at Magnolia. For a guide to creating your own .deb and .rpm packages for Magnolia please see the [Creating Debian and Redhat Packages](#) guide.

## Debian/Ubuntu

Adding the repository and installing the community edition is as easy as:

1. `curl https://packages.magnolia-cms.com/debian/apt.key | sudo apt-key add -`
2. `echo "deb http://debian.magnolia-cms.com/debian jessie main" | sudo tee /etc/apt/sources.list.d/magnolia.list`
3. `sudo apt-get update`
4. `sudo apt-get install magnolia-ce-author magnolia-ce-public`

## Redhat

Still in development.
