

Content and score models

Score models are not only for page components or templates. They can also be used and assigned to contents.

Score models on content apps

- Decoupled from rendering layouts/templates
- One score model applies to multiple components/pages
- Focus on the content consumption instead of element interactions

Integrate score models into detail form

```
/my-module/decorations/target-module/apps/app-name.yaml
```

```
subApps:
  detail:
    editor:
      form:
        tabs:
          - !include:/magnolia-recommender/dialogs/scoreModel.yaml
```

Integrate score models into template script

```
<a class="yourButton" ${scorefn.getComponentScoreModelMetaTag("your node id", 'your node workspace')}>...
```
