

reCAPTCHA v3

Magnolia Compatibility	
6.2	✓
5.7	✓

A fork of [BIT IT's reCAPTCHA v3](#) updated for 6.2. [Google's reCAPTCHA v3](#) returns a score for each request without user friction. The score is based on interactions with your site and enables you to take an appropriate action for your site. The module includes decorations for the form module so no assembly required. Simply make the [form components](#) available on your site.

- [Prerequisites](#)

- [Issues, Bugs and Improvements](#)
- [Usage](#)
 - [Configuration](#)
- [Known Issues](#)
- [References](#)

Prerequisites

- Register reCAPTCHA v3 keys [here](#).

Installation

Available as a light module

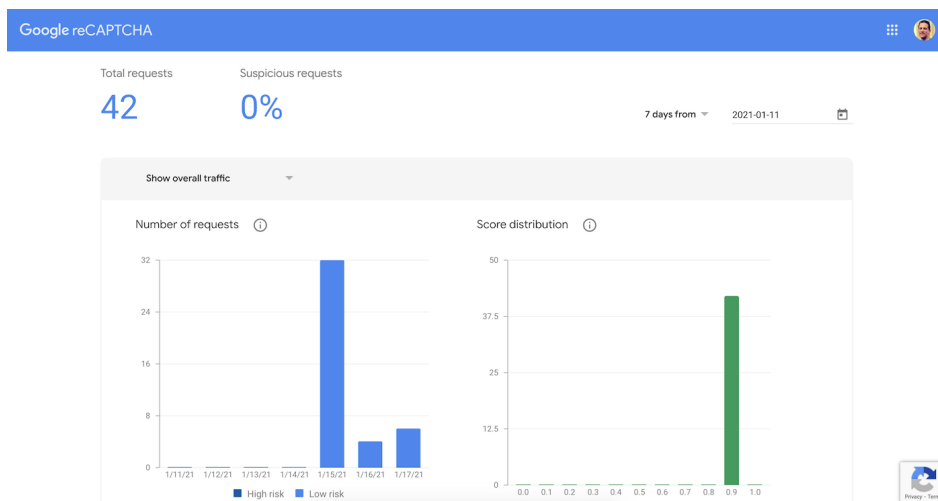

Magnolia 6.2	magnolia-recaptcha-v3 6.2
Magnolia 5.7	magnolia-recaptcha-v3 5.7

Issues, Bugs and Improvements

Report them here: <https://github.com/rgange/magnolia-recaptcha-v3/issues>

Usage

Use the Google reCAPTCHA dashboard to see the request statistics.

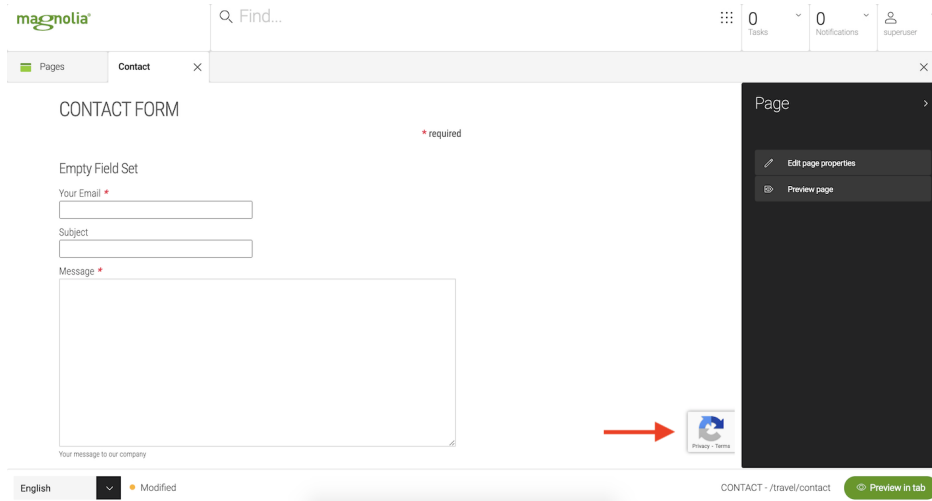

Configuration

There is a secret key and a site key to be set.

- **secret key:** See <https://github.com/rgange/magnolia-recaptcha-v3/blob/master/templates/js/formProcessors/recaptcha.js>
- **site key:** Set by the component dialog. See [magnolia-recaptcha-v3:components/form/googleCaptchaField](#)

The module is already [decorating two components the forms module](#). Simply make the form components available on your site. See the [travel demo](#) for an example.

Using the contact page of the travel demo as an example, you can see the reCAPTCHA logo in the bottom corner when the component has been added to the page.

Known Issues

- [Two processors](#), which should I use?
 - The script `addRecaptcha.js` is the original script from BIT IT and requires an additional jar outside the jars already provided by community edition.

```
<dependency>
  <groupId>org.json</groupId>
  <artifactId>json</artifactId>
  <version>20201115</version>
</dependency>
```

The script `recaptcha.js` does not require any additional resources.
