Standard Templating Kit

Your Rating: ☆☆☆☆☆   Results: ★★★★★ 125 rates

Magnolia Standard Templating Kit (STK) is a best-practice framework for creating web sites. STK ships with highly configurable, production-ready templates for common use cases such as articles, news, events, sitemaps and image galleries, while providing developers and creative designers with maximum creative freedom to build a custom site. Templates can be written in JSP and Freemarker or any other language. The benefits of STK can be summarized as:

- You don't have to start from scratch. Many fully-functioning examples are provided
- It speeds up site development.
- It reduces project risk since the templating mechanism and examples are guaranteed to work.

STK is fully SEO optimized, uses semantic html and adheres to accessibility standards.

Documentation

Templating. Official, covers STK

Other Material

The STK Documentation Material page collects some valuable content which is not yet part of the STK Book.
